

THE CONSEQUENCES OF CLIMATE CHANGE IN DENMARK

Lea, David, Teresa and Zenia

INTRODUCTION TO THE POEM

This is the 8.5 scenario, which shows the worst case scenario of the climate change in year 2050

An aerial photograph of a city, likely in Scandinavia, featuring a prominent brick cathedral with two tall, slender spires. The cathedral is situated in a large, open square. Surrounding the cathedral are various residential and commercial buildings, including multi-story houses with red roofs and a yellow building. The city extends to the horizon under a sky filled with grey, overcast clouds.

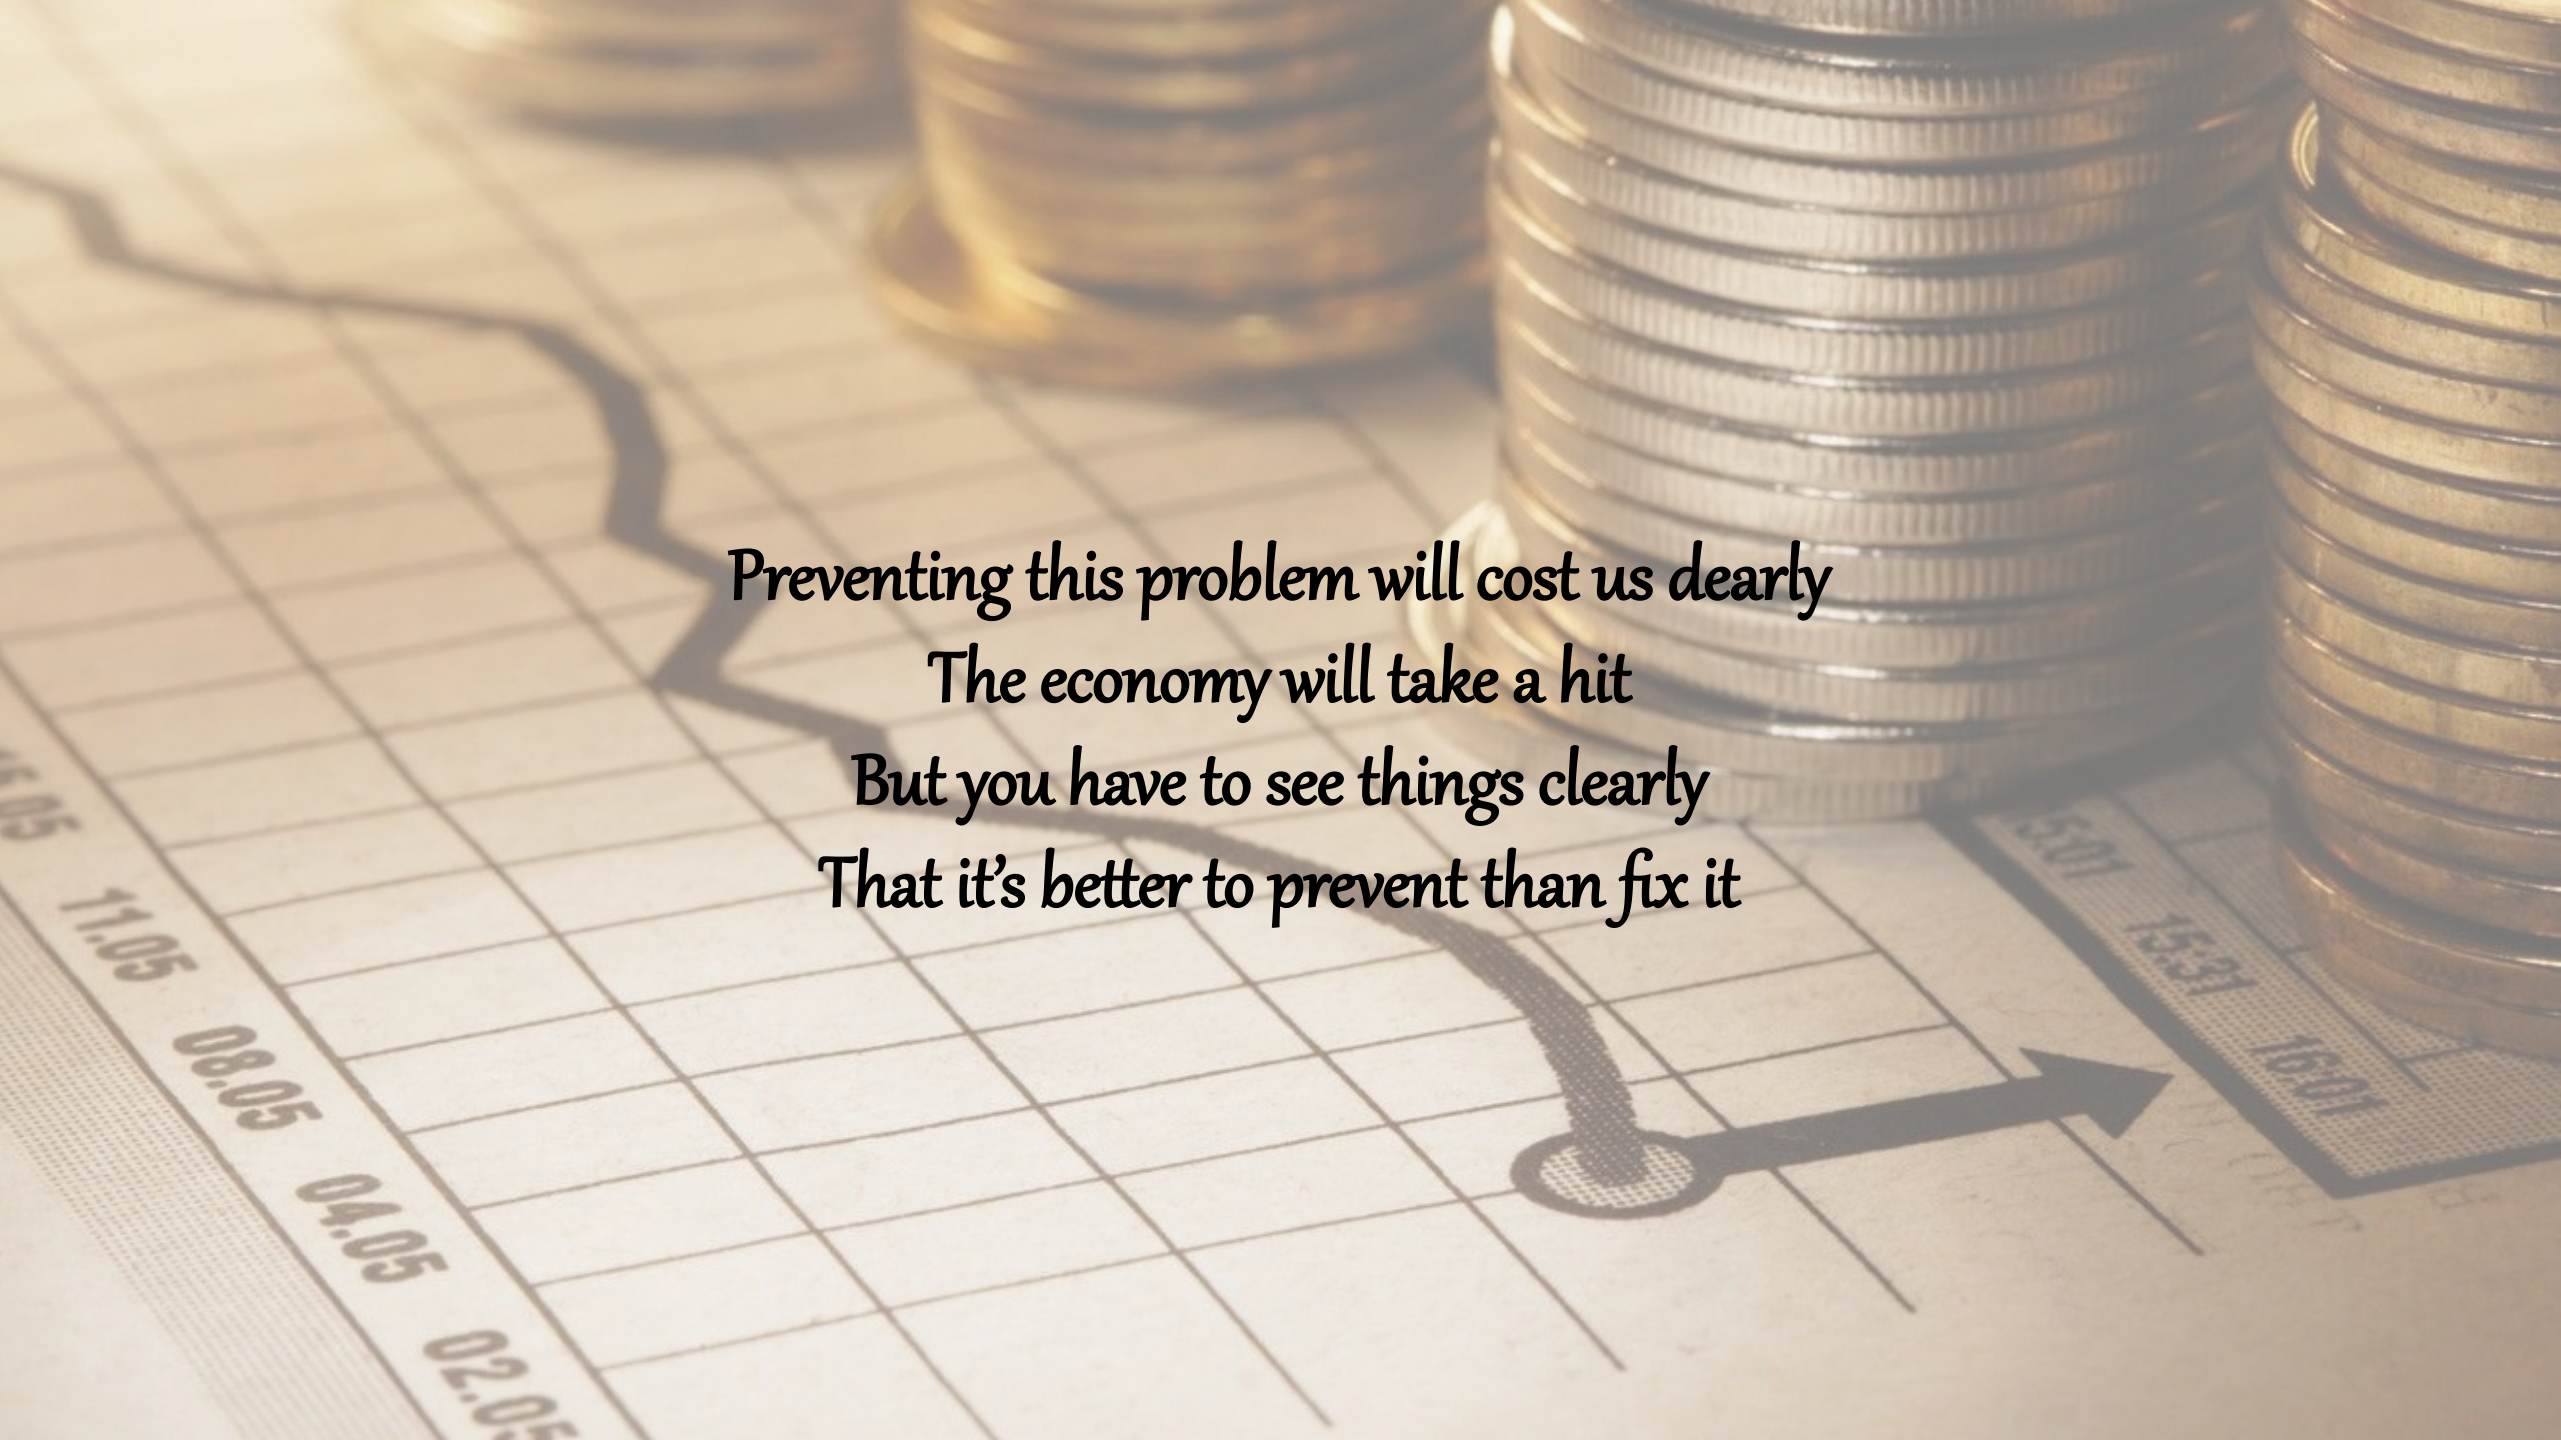

*The climate is getting worse, and we all know it
We need to do something if others won't
Do we stand by and just allow it?
And what will happen if we don't?*

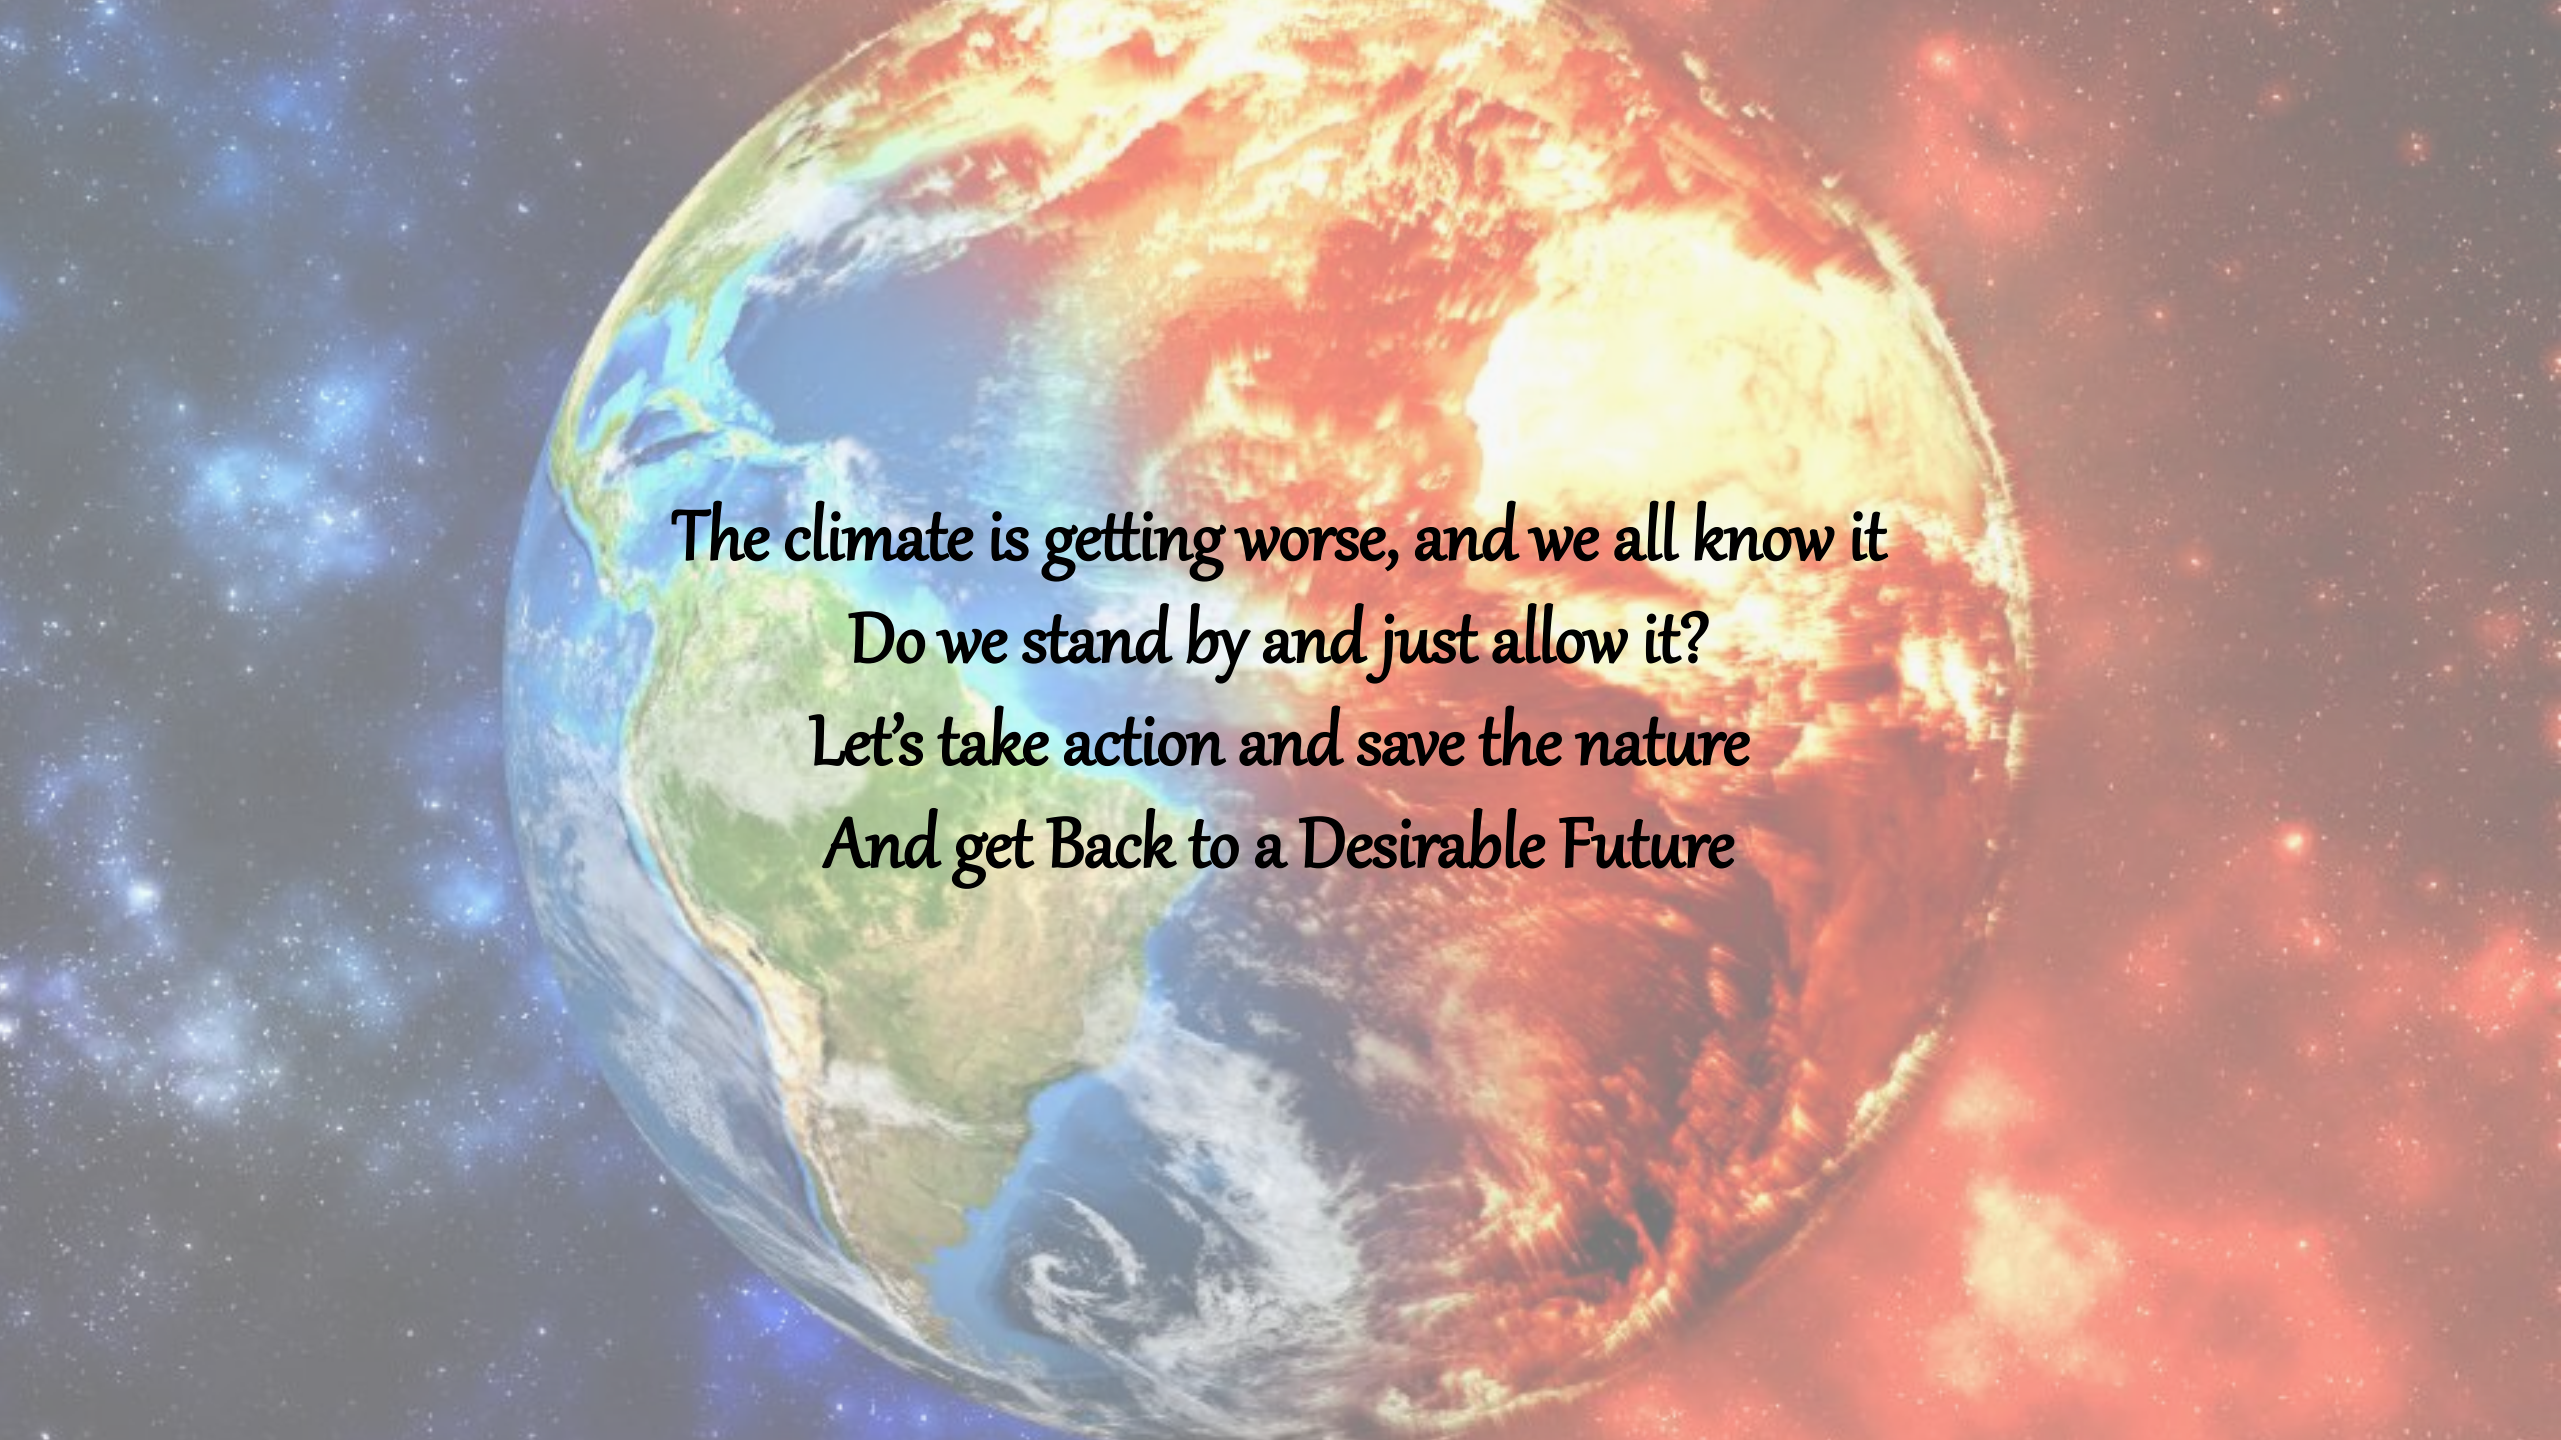

*Heatwaves and droughts in summer
Cloudbursts and snowless winters
Crops dying, the birds are flying
We show no remorse for the world we're harming*

*The ocean will soon start rising
It will flood the streets and people's homes
But these consequences are not surprising
Everywhere you look you'll see sea foam*

*Preventing this problem will cost us dearly
The economy will take a hit
But you have to see things clearly
That it's better to prevent than fix it*

The climate is getting worse, and we all know it
Do we stand by and just allow it?
Let's take action and save the nature
And get Back to a Desirable Future
